MJ-HW40VH

This professional robotic Pan tilt head is specifically designed for broadcast television, virtual studios, and film production. Featuring high-precision servo drive technology, it delivers fully automated motion control with multi-protocol compatibility. Can support almost type of camera and lens with MJ lens driver.

FEATURES

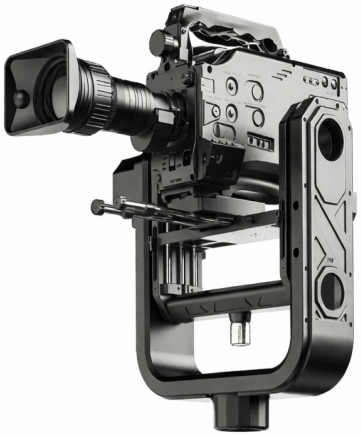
- **Easy setup**
- Move Programmable, full automatically
- One time calibration
- Auto targeting the stage
- Flexible presets, edit and modify the movement
- Key frame preset, AI generate motions
- Trigger to run
- Can be integrated into third part automation system

Safety
- Limit position

Tracking System
- 23 bits absolute value encoders
- Tracking accuracy up to 0.000043°
- Free-D protocol
- Genlock: BB Singnal or 12G-SDI
- No drift

CONFIGURATION

One set of robotic pan and tilt head
One License for control software
One set of control cable, power supply cable
One set of cable for lens control



SPECIFICATION

1. Total payload 40kg
2. Brushless encoder
3. Tilt angle 109deg
4. Pan angle 720deg
5. Max velocity: 120deg
6. Tracking FreeD
7. Remote control via IP web interface
